Dear Doctor

About a month ago I sent you seeds of Nuphar polysepalum with seed vessels and hope they will reach you in good condition.

The testimony is very positive and I think credible; that the Pinus tuberculata, on the head waters of the Middle Fork (of the Willamette) grows not less than sixty feet high

Accept my thanks for your Pines, Junipers and Firs — They will be of great use to me if I can ever get time to look at a tree again.

During my absence my wife gave Dr. Parry for you my specimens of Sagittaria I do not know what condition they were in and she does not remember but if they are not satisfactory we will try to supply you farther.

Hoping the last part of your trip proved pleasant and that I may sometimes hear from you, I remain

Yours truly
G. H. Collier
